## VALORES CRÍTICOS DE ARLEY

Equação para calcular o  $r_i$  de cada item da amostra

$$r_i = \left| \frac{x_i - \bar{x}}{s} \right|$$

Onde :

- $r_i$  = módulo do valor  $r$  de cada item da amostra
- $x_i$  = item da amostra
- $\bar{x}$  = média da amostra
- $s$  = desvio-padrão da amostra

Se  $r_i > r_{s_{crítico}}$ , então o elemento  $i$  é um ponto atípico ( outlier ).

O valor de  $r_{crítico}$  é dado pela distribuição marginal  $r$  de Student para  $v$  graus de liberdade ( $v = n - 2$ ), sendo  $n$  o tamanho da amostra.

## VALORES CRÍTICOS DO CRITÉRIO DE ARLEY

Nível de significância				
n	Até 5	De 6 a 10	De 11 a 50	Mais de 50
significância	10%	5%	1%	0,1%

O tamanho da amostra determina o nível de significância aplicável.

## Valores tabelados do $r_{crítico}$ - critério de Arley
